Product Catalog

Our mission is to help healthcare professionals deliver better products and services, and to **make life more rewarding and dignified** for those who use our products.

HCPCS Codes Disclaimer

The reimbursement information provided herein is intended to provide general information concerning coding of Hollister products only. Hollister does not guarantee coverage or payment for any products. The ultimate responsibility for proper coding, satisfying reimbursement requirements, and obtaining reimbursement remains with the provider. Coding and coverage policies and guidelines are complex, can vary from one carrier or region to another, and are updated frequently. Providers should check with their local carriers or intermediaries often and should consult with counsel, a reimbursement specialist, and/or the DMECS website for any coding, coverage, reimbursement, or billing questions.

HCPCS codes shown in this Product Catalog are current as of January 2016.

Latex Statement

The specifications for the Hollister Continence Care products listed below include natural rubber latex as a component; our suppliers add natural rubber latex as part of the production process.

If a Hollister product(s) found in this catalog is not listed below, the specification for that product(s) and packaging does not include natural rubber latex as a component, and our component suppliers do not add natural rubber as part of their production process.

Current Stock Numbers:

1051	9107	9207	B12R	B12RB
1067	9108	9208	B14R	B14RB

How to Use The Hollister Product Catalog

Hollister has created this simplified product catalog to help our customers find what they need in a quick and efficient manner.

If you...

know the stock number (or stock series number)

Go to the numeric index at the back of the catalog on pages 160–161 to find the page number where it appears.

If you...

know the product brand or series name

Go to the Table of Contents on pages 5, 6-7, 86, 106 and 116 to find the page number where it appears or reference the Product Name Index on pages 162–164.

If you...

know the HCPCS code

Go to the HCPCS Code Index at the back of the catalog on page 165.

Lubricating Deodorant	*
Ostomy Belt	1
Skin Protective Wipes	150/6 months

**There is currently not a defined usual maximum quantity. Therefore individual consideration will determine how many are allocated per month.*

Medicare's Usual Maximum Quantity for Ostomy Supplies

The quantity of ostomy supplies needed by a patient is determined primarily by the type of ostomy, its location, its construction, and the condition of the skin surface surrounding the stoma. There will be variation according to individual patient need and their needs may vary over time. The table below lists the maximum number of items/units of service that are usually medically necessary. The actual quantity needed for a particular patient may be more or less than the amount listed depending on the factors that affect the frequency of barrier and pouch change. The medical necessity for use of a greater quantity of supplies than the amounts listed must be clearly documented in the patient's medical record, and must be available upon request. If adequate documentation is not provided when requested, the excess quantities will be denied as not medically necessary.

Per LCD for Ostomy Supplies (L33828), NHIC effective 10-1-2015.

HCPCS	Long Description	Maximum Quantity
A4331	Extension drainage tubing, any type, any length, with connector/adaptor, for use with urinary leg bag or urostomy pouch, each	*
A4357	Bedside drainage bag, day or night, with or without anti-reflux device, with or without tube, each	2 ea /mo
A4361	Ostomy faceplate, each	3 ea/6 mo
A4362	Skin barrier, solid, 4 x 4 or equivalent, each	20 ea/mo
A4363	Ostomy clamp, any type, replacement only, each	*
A4364	Adhesive, liquid or equal, any type, per ounce	4 oz/mo
A4366	Ostomy vent, any type, each	*
A4367	Ostomy belt, each	1 ea/mo
A4368	Ostomy filter, any type, each	*
A4369	Ostomy skin barrier, liquid (spray, brush, etc.), per ounce	2 oz/mo
A4371	Ostomy skin barrier, powder, per ounce	10 oz/6 mo
A4372	Ostomy skin barrier, solid 4 x 4 or equivalent, standard wear with built-in convexity, each	*
A4373	Ostomy skin barrier, with flange (solid, flexible, or accordion), with built-in convexity, any size, each	*
A4375	Ostomy pouch, drainable, with faceplate attached, plastic, each	*
A4376	Ostomy pouch, drainable, with faceplate attached, rubber, each	*
A4377	Ostomy pouch drainable for use on faceplate, plastic, each	10 ea/mo
A4378	Ostomy pouch, drainable, for use on faceplate, rubber, each	*
A4379	Ostomy pouch, urinary, with faceplate attached, plastic, each	*
A4380	Ostomy pouch, urinary, with faceplate attached, rubber, each	*
A4381	Ostomy pouch, urinary, for use with faceplate, plastic, each	10 ea/mo
A4382	Ostomy pouch, urinary, for use on faceplate, heavy plastic, each	*
A4383	Ostomy pouch, urinary, for use on faceplate, rubber, each	*
A4384	Ostomy faceplate equivalent, silicone ring, each	*
A4385	Ostomy skin barrier, solid 4 x 4 or equivalent, extended wear, without built-in convexity, each	*
A4387	Ostomy pouch, closed, with barrier attached, with built-in convexity (one-piece), each	*
A4388	Ostomy pouch, drainable, with extended wear barrier attached, (one-piece), each	*
A4389	Ostomy pouch, drainable, with barrier attached, with built-in convexity (one-piece), each	*

* No established usual maximum, refer to Medicare Utilization Guidelines.

A4406	Ostomy skin barrier, pectin-based, paste, per ounce	4 oz/mo
A4407	Ostomy skin barrier, with flange (solid, flexible, or accordion), extended wear, with built-in convexity, 4 x 4 inches or smaller, each	*
A4408	Ostomy skin barrier, with flange (solid, flexible, or accordion), extended wear, with built-in convexity, larger than 4 x 4 inches, each	*
A4409	Ostomy skin barrier, with flange (solid, flexible, or accordion), extended wear, without built-in convexity, 4 x 4 inches or smaller, each	*
A4410	Ostomy skin barrier, with flange (solid, flexible, or accordion), extended wear, without built-in convexity, larger than 4 x 4 inches, each	*
A4411	Ostomy skin barrier, solid 4 x 4 or equivalent, extended wear, with built-in convexity, each	*
A4412	Ostomy pouch, drainable, high output, for use on a barrier with flange (two-piece system), without filter, each	*
A4413	Ostomy pouch, drainable, high output, for use on a barrier with flange (two-piece system), with filter, each	*
A4414	Ostomy skin barrier, with flange (solid, flexible, or accordion), without built-in convexity, 4 x 4 inches or smaller, each	20 ea/mo
A4415	Ostomy skin barrier, with flange (solid, flexible, or accordion), without built-in convexity, larger than 4 x 4 inches, each	20 ea/mo
A4416	Ostomy pouch, closed, with barrier attached, with filter (one-piece), each	60 ea/mo
A4417	Ostomy pouch, closed, with barrier attached, with built-in convexity, with filter (one-piece), each	60 ea/mo
A4418	Ostomy pouch, closed, without barrier attached, with filter (one-piece), each	60 ea/mo
A4419	Ostomy pouch, closed, for use on barrier with non-locking flange, with filter (two-piece), each	60 ea/mo
A4420	Ostomy pouch, closed, for use on barrier with locking flange (two-piece), each	60 ea/mo
A4421	Ostomy supply; miscellaneous	*
A4422	Ostomy absorbent material (sheet/pad/crystal packet) for use in ostomy pouch to thicken liquid stomal output, each	*

* No established usual maximum, refer to Medicare Utilization Guidelines.

HCPCS	Long Description	Quantity
A4423	Ostomy pouch, closed, for use on barrier with locking flange, with filter (two-piece), each	60 ea/mo
A4424	Ostomy pouch, drainable, with barrier attached, with filter (one-piece), each	20 ea/mo
A4425	Ostomy pouch, drainable, for use on barrier with non-locking flange, with filter (two-piece system), each	20 ea/mo
A4426	Ostomy pouch, drainable, for use on barrier with locking flange (two-piece system), each	20 ea/mo
A4427	Ostomy pouch, drainable, for use on barrier with locking flange, with filter (two-piece system) each	20 ea/mo
A4428	Ostomy pouch, urinary, with extended wear barrier attached, with faucet-type tap with valve (one-piece), each	*
A4429	Ostomy pouch, urinary, with barrier attached, with built-in convexity, with faucet-type tap with valve (one-piece), each	20 ea/mo
A4430	Ostomy pouch, urinary, with extended wear barrier attached, with built-in convexity, with faucet-type tap with valve (one-piece), each	*
A4431	Ostomy pouch, urinary, with barrier attached, with faucet-type tap, with valve (one-piece), each	20 ea/mo
A4432	Ostomy pouch, urinary, for use on barrier with non-locking flange, with faucet-type tap with valve (two-piece), each	20 ea/mo
A4433	Ostomy pouch, urinary, for use on barrier with locking flange (two-piece), each	20 ea/mo
A4434	Ostomy pouch, urinary, for use on barrier with locking flange, with faucet-type tap with valve (two-piece), each	20 ea/mo
A4435	Ostomy pouch, drainable, high output, with extended wear barrier (one-piece system), with or without filter, each	*
A4450	Tape, non-waterproof, per 18 square inches	40 ea (18 sq in)/mo
A4452	Tape, waterproof, per 18 square inches	40 ea (18 sq in)/mo
A4455	Adhesive remover or solvent (for tape, cement, or other adhesive), per ounce	16 oz/6 mo
A4456	Adhesive remover, wipes, any type, each	*
A5051	Ostomy pouch, closed, with barrier attached (one-piece), each	60 ea/mo
A5052	Ostomy pouch, closed, without barrier attached, (one-piece), each	60 ea/mo
A5053	Ostomy pouch, closed, for use on faceplate, each	60 ea/mo
A5054	Ostomy pouch, closed, for use on barrier with flange (two-piece), each	60 ea/mo
A5055	Stoma Cap	31 ea/mo
A5056	Ostomy pouch, drainable, with extended wear barrier attached, with filter, (one-piece), each	40 ea/mo
A5057	Ostomy pouch, drainable, with extended wear barrier attached, with built-in convexity, with filter, (one-piece), each	40 ea/mo
A5061	Ostomy pouch, drainable, with barrier attached (one-piece), each	20 ea/mo
A5062	Ostomy pouch, drainable, without barrier attached (one-piece), each	20 ea/mo
A5063	Ostomy pouch, drainable, for use on barrier with flange (two-piece system), each	20 ea/mo
A5071	Ostomy pouch, urinary, with barrier attached (one-piece), each	20 ea/mo
A5072	Ostomy pouch, urinary, without barrier attached (one-piece), each	20 ea/mo
A5073	Ostomy pouch, urinary, for use on barrier with flange (two-piece), each	20 ea/mo

* No established usual maximum, refer to Medicare Utilization Guidelines.

A9270	Non-covered item or service	*

* No established usual maximum, refer to Medicare Utilization Guidelines.

DID YOU KNOW...

How to Size **Hollister** Ostomy Pouches

A properly-fitted pouching system is essential to minimize stomal and skin irritation, and to obtain optimum pouch wear time. A stoma measuring guide allows correct measurement of the stoma. Measure the stoma accurately. Select the smallest barrier opening which fits comfortably around the stoma without actually touching it. Too large of an opening will leave skin exposed and could lead to skin irritation or erosion.

Maintaining the
Right Environment
Makes all the
Difference

The CeraPlus™ skin barrier with Remois technology*

At Hollister, we realize the importance of healthy peristomal skin. Our latest skin barrier is infused with ceramide, the skin's naturally occurring protection against dryness. The CeraPlus skin barrier is designed to maintain adhesive properties, and features a proprietary formulation designed to help protect the skin's own moisture barrier. The CeraPlus skin barrier from Hollister—because peristomal skin deserves better.

Hollister Ostomy. **Details Matter.**

**Remois is a technology of Alcare Co., Ltd.*

DID YOU KNOW...

A True Original

The Hollister integrated floating flange—as featured in the *New Image* two-piece pouching system—offers optimal flexibility and security for you and your patients. The first of its kind, this integrated floating flange helps relieve pressure on the tender postoperative or soft abdomen while offering an easy-to-use, low-profile solution patients can continue to use after they transition home. Included in all flat and convex *New Image* skin barriers.

Convex Skin Barrier Options

The *New Image* two-piece pouching system delivers several skin barrier options to fit a variety of patient needs. Built-in convexity options provide extra security for recessed and flush stomas, and soft peristomal skin. Convex skin barriers are also available with and without tape.

The original Urostomy series of

1840x/1841x/1842x

has evolved to

1890x/1891x/1892x

Our 1890x series of New Image urostomy pouches feature a softer, more streamlined tap with attached cap designed to help provide increased comfort. Plus, a unique multi-chamber design helps distribute urine evenly in the pouch, for a more discreet profile. The 1890x series is our most advanced urostomy pouching system ever.

DID YOU KNOW...

- Cut-to-fit products have a 1/2" (13 mm) starter hole and can be used as a pre-sized product for some small stomas (excludes *Pouchkins* products)
- Cutting guides are provided for all cut-to-fit barriers
- Drainable pouches without an integrated closure include one pouch clamp per box
- We do not recommend the use of skin protective wipes (**Hollister** Stock No 7917) or other brands to be used with the extended wear skin barriers, as they may decrease wear time

A Flexible Fit.
Made Secure.

Premier Soft Convex Pouching System

Designed to stay secure, no matter what shape the body takes.

When it comes to finding the right solution for patients, fit comes first. Comfort and ease-of-use are also essential to help ensure positive outcomes—in the hospital and after patients leave your care.

Hollister Ostomy presents Premier soft convex—a pouching system that delivers both convex support and flexibility. The skin barrier is designed to conform to the body, without compromising fit. Belt tabs and a tape-bordered barrier help provide extra security. And the new viewing option offers a convenient way to help position the pouch and observe output.

**Discover the new shape of convexity today.
See pages 41, 43 and 44 for stock number information

Count on the Right Fit
With Adapt
Barrier Rings

Hollister understands that no two people or stomas are alike—and that barrier rings can play a critical role in helping ensure the best outcome for your patients

Whether you choose flat or convex, slim or regular, round or oval—Adapt barrier rings:

- Are designed to be stretched or shaped
- Help prevent ostomy output from getting under the pouch seal, which may reduce leakage and skin irritation
- Can be cut or stacked together to improve the fit of the pouching system
- Are designed for extended wear
- Are alcohol free, so there is no sting from alcohol when applied to broken or irritated skin

Talk to your Hollister ostomy representative about the full line of Adapt barrier rings.

Easy adhesive removal from any angle.

Adapt Medical Adhesive Remover Spray
Stock Number 7737

With its silicone-based, alcohol-free formulation, the Hollister Adapt medical adhesive remover spray delivers an efficient solution for barrier removal without the sting caused by alcohol.

It features innovative 360° spray technology to deliver controlled, quiet spraying from any angle, with minimal waste.

No-sting adhesive removal just got easier.

Talk to your Hollister Ostomy Sales Specialist about making no-sting adhesive removal simpler with Adapt medical adhesive remover spray.

Featuring a pressurized bag, the new can delivers convenient, all-angle spraying.

Irrigation Products

General Information

- ▶ Similar to an enema with the water being placed into the stoma.
- ▶ Routine irrigation is recommended to be done on doctor's orders (to regulate emptying the bowel at a scheduled time).
- ▶ Appropriate for some people with sigmoid or descending colostomies.
- ▶ Not appropriate for people with urostomy or ileostomy.
- ▶ Allow approximately one hour for irrigation procedure.

CenterPointLock Two-Piece Pouching System

Letter Matching System

To help you select compatible *CenterPointLock* two-piece system components, every *CenterPointLock* system product box label features a letter designation: Ⓜ, ⓐ, ⓑ, ⓓ, or ⓔ. Once you've selected a *CenterPointLock* two-piece system skin barrier, select a pouch, irrigator drain, or stoma cap with a matching letter on the box label.

Fistula
Management

Enterocutaneous Fistula Management

Key Goals for Nursing Management

- **Protect the skin** – The output from a fistula can be very irritating to the skin. Broken skin contributes to pain and discomfort. A skin barrier can protect the skin from contact with the drainage.
- **Contain the output** – If the output is minimal, gauze dressings may be sufficient for containment. However, if the volume of the output from the fistula is significant or frequently overwhelms the dressing, a pouch may be more appropriate. Using a pouch can be more efficient and can protect healthcare providers from exposure to bodily fluids.
- **Measure the output** – With a high output fistula, loss of fluids and electrolytes can be a major concern. Measuring the drainage is easier using a pouching system. Sometimes connecting a pouch to a bedside collector can relieve the stress on the pouch, so the wear time improves.
- **Manage costs** – Care of fistulas can be costly in terms of supplies and human resources. Using a pouching system and appropriate accessories can be more cost-effective and manageable than frequent dressing changes.
- **Control odor** – Containment of the drainage in a pouching system, even in small quantities, can manage odor effectively. Other accessory products can also assist with odor control when the pouch is changed or emptied.
- **Provide patient comfort** – Effectively managing a fistula can contribute to patient dignity. Protecting the skin, collecting the discharge, containing costs, and controlling odor all contribute to patient comfort.

Reimbursement by Medicare

Reimbursement for fistula management under the Medicare program is described in the Surgical Dressings Policy Article. Specifically the article states:

“Surgical dressings are covered when either of the following criteria are met:

1. They are required for the treatment of a wound caused by, or treated by, a surgical procedure; **or**
2. They are required after debridement of a wound.”

The article goes on to explain:

“Examples of situations in which dressings are noncovered under the Surgical Dressings benefit are:

- a. Drainage from a cutaneous fistula which has not been caused by or treated by a surgical procedure”

For information see The Fistula Management Care Tip on www.hollister.com

- ▶ Ideal for High Volume, Liquid Discharge
- ▶ Provides Larger Container for Collection of Fluid

AF300 Filter: “AF” stands for air flow and “300” represents the 300 mm² air flow surface area on every AF300 filter.

CeraPlus Skin Barrier: An extended wear skin barrier that has all the basic characteristics of an ostomy skin barrier (adhesion, absorption, and erosion resistance) and is infused with ceramide.

Closed Pouch: A pouch without a spout or a clamp. Quick and easy to discard. It must be removed to be emptied.

Colostomy: An ostomy (surgical opening) created in the colon, part of the large intestine.

ComfortWear Pouch Material: Lining over the plastic of the pouch to enhance comfort and discretion. The soft pouch panels may be on one or both sides of the pouch.

Convex Skin Barrier: Convex products curve outward toward the peristomal skin to increase the depth of the skin barrier. This outward curving is designed to promote a good seal between the ostomy pouching system and the skin where flat skin barriers would be unsuccessful.

Cut-to-Fit Skin Barrier: A skin barrier that can be cut to the right size and shape for the stoma.

Drainable Pouch: A pouch with an opening at the bottom. An integrated closure or clamp is used to keep the pouch closed until it is time to empty it.

Enterocutaneous Fistula: An abnormal connection between the intestine and the skin.

Extended Wear Skin Barrier: Skin barriers with special additives that achieve a stronger adhesive seal and are more resistant to breakdown. Skin barrier of choice for urostomies and ileostomies. It is not recommended to use skin-prepping agents under extended wear skin barriers.

Filter: Releases gas but not odor from a pouch. The key performance factors of any filter are air flow, deodorization, and liquid protection.

Flange: The plastic ring in a two-piece ostomy system that is used to connect the two parts together.

Flat Skin Barrier: Skin barriers that may be used when the stoma protrudes from the abdomen.

Flexextend Skin Barrier: An extended wear skin barrier that is durable and offers high resistance to erosion. It swells when it comes in contact with liquid to help form a seal between the skin and the stoma. It offers strong adhesion and flexibility.

FlexWear Skin Barrier: A standard wear skin barrier that provides moderate adhesion, and offers a good balance of durability and gentleness. It is designed to be worn more than one day and tends to hold its shape in the presence of fluids.

Floating Flange: Allows for fingers to be put under the flange for support while attaching the pouch to the barrier on a two-piece pouching system. The *New Image* two-piece pouching system has an integrated floating flange.

FormaFlex Skin Barrier: An extended wear skin barrier which is resistant to discharge. It has the ability to be stretched to fit the size and shape of the stoma without the use of scissors. Found as an option in the *New Image* two-piece system.

Ileostomy: An ostomy (surgical opening) created in the small intestine.

Irrigation: A procedure used to control the time of elimination from colostomy. It is not for everyone and requires special equipment and teaching.

Karaya 5 Skin Barrier: *Karaya* is a natural skin barrier that is well-suited for thin, fragile, and sensitive skin or in some cases where irritant dermatitis has occurred. It is mildly adhesive and needs a belt or tape to secure the pouching system.

Lock 'n Roll Microseal Closure: An integrated system for closing the bottom of drainable pouches. This system utilizes plastic interlocking microseals to create a secure closure. Found on *New Image*, *Premier*, and *Pouchkins* drainable pouches.

Odor-Barrier Pouch: Features pouch film that is resistant to odor permeation. The odor-barrier feature increases confidence when wearing a pouch.

Pre-Sized Skin Barrier: A skin barrier that is already cut to the proper size if stoma is round.

QuietWear Pouch Material: Material comprised of a pouch film and *ComfortWear* panel that are laminated together. This special design results in the reduction of the pouch rustling noise.

Rustle-Free Pouch: Rustle-Free Pouch provides for ultimate discretion since the pouch does not make noise during normal wear.

Shape-To-Fit: A skin barrier that can be stretched to the shape and size of the stoma. This skin barrier does not require use of a scissors. A possible choice when the stoma is not round or still changing sizes.

Skin Barrier: Portion of the pouching system that protects the skin from contact with the discharge. It also provides an adhesive attachment for the pouching system to the body. Examples include *Flexend*, *FlexWear*, *SoftFlex*, and *FormaFlex* skin barriers.

SoftFlex Skin Barrier: A standard wear skin barrier, which has an adhesive that is gentle to the skin, and allows for frequent pouch changes. It offers lower erosion resistance, and is thin and flexible without compromising security.

Standard Wear Skin Barrier: Provides a gentle adhesive attachment to the skin. These skin barriers absorb less and disintegrate faster than extended wear skin barriers. Examples include *FlexWear* and *SoftFlex* skin barriers.

Stoma: The place where the drainage comes out of the body when you have an ostomy. The stoma is red, moist and does not have feeling.

Urostomy: An ostomy (surgical opening) created to drain urine.

Urostomy Pouch: Pouch with a drain tap at the bottom so urine can be emptied quickly and easily.

Wear Time: The length of time a product can be worn before failure. Wear time varies widely based upon a variety of factors.

Continence Care

VaPro

Touch Free Hydrophilic
Intermittent Catheter

We're for the
child who is
your source
of inspiration.

- 1 Ease of use
- 2 Comfort
- 3 Protection

A child's first priority is to be a child. As a parent, you can accomplish that by introducing **VaPro** touch free catheters into his or her daily routine. Sized for pediatric use, and designed for comfort and easy handling, it makes intermittent catheterization a simple part of your little one's life, right from the start.

HCPCS Codes Disclaimer

The reimbursement information provided herein is intended to provide general information concerning coding of Hollister products only. Hollister does not guarantee coverage or payment for any products. The ultimate responsibility for proper coding, satisfying reimbursement requirements, and obtaining reimbursement remains with the provider. Coding and coverage policies and guidelines are complex, can vary from one carrier or region to another, and are updated frequently. Providers should check with their local carriers or intermediaries often and should consult with counsel, a reimbursement specialist, and/or the DMECS website for any coding, coverage, reimbursement, or billing questions.

HCPCS codes shown in this Product Catalog are current as of January 2016.

Medicare's Usual Maximum Quantity for Urological Supplies

The quantity of urological supplies needed by a patient is determined by many factors. There will be variation according to individual need and their needs may vary over time. The table below lists the maximum number of items/units of service that are medically necessary. The actual quantity needed for a particular patient may be more or less than the amount listed. The medical necessity for use of a greater quantity of supplies than the amounts listed must be clearly documented in the patient's medical record, and must be available upon request.

Per LCD for Urological Supplies (L33803), NHIC effective 10-1-2015.

HCPCS	Long Description	Quantity
A4217	Sterile water/saline, 500 mL	*
A4310	Insert tray without drainage bag and without catheter (accessories only)	1 tray/insertion
A4311	Insertion tray without drainage bag with indwelling catheter, foley type, two-way latex with coating (Teflon, silicone, silicone elastomer, or hydrophilic, etc.)	1 tray/insertion
A4312	Insertion tray without drainage bag with indwelling catheter, foley type, two-way all silicone	1 tray/insertion
A4313	Insertion tray without drainage bag with indwelling catheter, foley type, three-way, for continuous irrigation	1 tray/insertion
A4314	Insertion tray with drainage bag with indwelling catheter, foley type, two-way latex with coating (Teflon, silicone, silicone elastomer, or hydrophilic, etc.)	1 ea/mo
A4315	Insertion tray with drainage bag with indwelling catheter, foley type, two-way, all silicone	1 ea/mo
A4316	Insertion tray with drainage bag with indwelling catheter, foley type, three-way, for continuous irrigation	1 ea/mo

A5200	Percutaneous catheter/tube anchoring device, adhesive skin attachment	*
A9270	Non-covered item or service	

* No established usual maximum, refer to Medicare Utilization Guidelines.

Note: Intermittent catheterization using a sterile intermittent catheter kit (A4353) is covered when the patient requires catheterization and the beneficiary meets one of the following criteria (1-5):

- 1) The beneficiary resides in a nursing facility
- 2) The beneficiary is immunosuppressed, for example (not all-inclusive): on a regimen of immunosuppressive drugs post-transplant, on cancer chemotherapy, has AIDS, has a drug-induced state such as chronic oral corticosteroid use
- 3) The beneficiary has radiologically documented vesico-urethral reflux while on a program of intermittent catheterization
- 4) The beneficiary is a spinal-cord-injured-female with neurogenic bladder who is pregnant (for duration of pregnancy only)
- 5) The beneficiary has had distinct, recurrent urinary tract infections, while on a program of sterile intermittent catheterization with A4351/A4352 and sterile lubricant A4332, twice within the 12 months prior to the initiation of sterile intermittent catheter kits.

VaPro Plus Pocket

Touch Free Hydrophilic Intermittent Catheter

We're for the
man who makes
his dreams
a reality.

You can help him.

By recommending **VaPro Plus Pocket** hydrophilic intermittent catheters, you can help patients focus on what matters. The catheters are easy to teach, learn and handle. Plus, the touch free design of the protective tip and sleeve are designed to help reduce bacterial contamination. Simple, clean, independence in a discreet package.

Female Urinary Pouch External Collection Device*

9840

Box of 10

- ▶ Cut-to-Fit, *SoftFlex* Skin Barrier
- ▶ Odor-Barrier Film
- ▶ Convenience Drain
- ▶ Alternative to Indwelling Catheter for Bedridden Females
- ▶ *Adapt* Paste, Tape Strips, and Skin Gel Wipe Included
- ▶ Not Made with Natural Rubber Latex

HCPCS: A4328

Stock No	Description	Length	Width
9840	Female Urinary Pouch	7-1/2"	4-1/2"

* Meant to be connected to leg bag or gravity drainage

Anti-Reflux: Refers to a tube or collapsible material within a urine collection device to help prevent urine from re-entering the tubing

Applicator Collar: Found on some Hollister male external catheters; a plastic guide with notches for the thumb and forefinger to assist proper placement against the tip of the penis

Bladder: A balloon-like muscular organ which lies in the pelvis and functions to store and expel urine

Bladder Catheterization: A procedure in which a catheter is passed through the urethra or stoma into the bladder for the purpose of draining urine and performing diagnostic tests of bladder or urethral function

Benzalkonium Chloride (BZK): An antimicrobial solution used for disinfecting the urethral opening prior to inserting an intermittent catheter. Does not stain skin or clothing. Less likely to cause sensitivity

Catheter (Urinary): A hollow tube inserted through the urethra or a stoma to the bladder to withdraw urine or administer medication

Closed System: Refers to a "touchless" catheter located within a urine collection bag. The enclosed catheter is manipulated through the bag, guided through the protective tip as it is inserted into the urethra or stoma without being directly touched

Closed System Kit: Closed system catheter includes the catheter located within the urine collection bag, and usually includes gloves, PVP or BZK swab sticks, and underpad drape

Collection Bag: A leg bag or bedside bag designed to collect urine by gravity that is connected by tubing to an indwelling or external catheter, urinary pouch, or also to wound drainage systems

Color Coded: On Hollister intermittent catheters, the funnel ends are color and size coordinated so catheters may be consistently ordered by size or funnel color

Connector: A device that secures the extension tubing to the catheter or urinary pouch system

Coudé Tip: A slight bend manufactured in the tip of the catheter which makes insertion past the prostate easier for some men. A notch at the funnel end is a guide for alignment during insertion

External Condom Catheter: Device that is secured externally with various adhesives to the penis shaft for the purpose of urine collection. Must be connected with tubing to a urine collection bag

Extension Tubing: Tubing that provides the connection between an external or indwelling catheter and a urine collection bag or leg bag. May also serve as a connection between an ostomy pouch or wound drainage collector. Made of latex or vinyl

Eyelet: An oval-shaped hole in the insertion end of the catheter to facilitate drainage of urine from the bladder. Eyelets are usually two in number, and may be across from each other or offset. Smooth eyelets help protect the urethra from insertion trauma

Female Urinary Pouch: A cut-to-fit, one-piece, vinyl pouch with a flexible synthetic barrier which is attached externally to the female urethral/vaginal area. The pouch is usually connected to a bedside collection bag. Recommended for the more immobile female

Firm Catheter: Refers to lesser pliability of a urethral catheter

Flexible: Refers to greater pliability of a urethral catheter or of a skin barrier found on the external female and male urinary pouches

Flexend Barrier: A skin barrier with special additives that achieve a stronger adhesive seal and are more resistant to breakdown from fluids. Skin-prepping agents are not recommended under *Flexend* Skin Barriers

French Size: Abbreviated Fr, the measuring gauge for the outer diameter of a straight or indwelling catheter

Funnel: Colored non-insertion end of an intermittent catheter allows for ease of fluid control. A catheter tipped syringe may be attached at the funnel for fluid instillation into the bladder. Color corresponds to specific French size

Gel Reservoir: A small, lubricant-filled flexible device unique to Hollister built into the *Advance Plus* touch free intermittent catheter system. The catheter is evenly coated with gel as it passes through the gel reservoir

Grip Section: A finely ribbed area on the catheter in a closed catheter system which assists with catheter control for continuous catheter advancement

Hydrophilic Catheter: A coated catheter that is lubricated with water

Incontinence: Loss of control of bowel and/or bladder

Indwelling Catheter: A flexible tube that remains in the bladder continuously to drain urine. May be referred to as a Foley catheter

Inner Flap: A thin, latex extra membrane inside Hollister *Extended Wear* latex male external catheters. The inner flap rests against the tip of the penis to prevent urine backwash and undermining of the catheter adhesive

Intermittent Catheter: A flexible tube that is used to empty the bladder on a regular schedule; used for self-catheterization

Latex: A material made from natural rubber. Red rubber catheters and some male external catheters are made from latex

Leg Bag Straps: Hold the leg bag in place

Luer End: No funnel on non insertion end. A syringe may be connected to the Luer end for bladder irrigation or insertion of medication

Lubricant: A water soluble jelly applied to a catheter prior to insertion which allows for easier insertion and helps minimize urethral irritation

Male External Urinary Pouch: A cut-to-fit, one-piece vinyl pouch with a synthetic adhesive backing that may be used for the very short penis, or the flush or retracted penis. Usually attached to a bedside collection bag, and is recommended more for those with limited mobility

Meatus: The opening of the urethra in both men and women

Neurogenic Bladder: An atonic or unstable bladder associated with a neurological condition, such as diabetes, stroke, or spinal cord injury

Non Latex: A material not made with Natural Rubber Latex; usually vinyl or silicone for catheters or plastic for collection bags. Minimizes risk of allergic reaction

Olive Tip: An oval-shaped catheter tip which makes it easier for a female to find the urethral opening when catheterizing

Pre-Lubricated Catheter: Refers to a catheter which is lubricated by passing through a gel reservoir, or a lubricated catheter in a closed system, or a catheter in packaging which contains a lubricant packet which is ruptured to lubricate the catheter prior to opening the packaging

Protective Tip: A specially designed system on some intermittent catheters which functions to prevent urethra bacterial contamination of the catheter. It is inserted into the urethra. The 15 mm length on the Hollister protective tip helps decrease the risk of introducing bacteria into the urethra. The tapered tip with multiple slits is designed for comfortable insertion

PVP: Povidone iodine solution used as an antimicrobial disinfectant applied to the urethral opening prior to catheter insertion. May stain clothing

Ring Cap: Cap on the protective tip protects the catheter tip. Ring assists with cap removal especially for those with limited dexterity. Oval cap design prevents roll away

Sizing Guide: Used for external catheters, these semicircular cutouts help determine the diameter of the penis in order to guide selection for correct fit

Soft Catheter: A gentle, flexible catheter with limited firmness

SoftFlex Barrier: A flexible synthetic material that will conform to rounded and some irregular surfaces. Gentle enough to be removed in 24 hours or less

Straight Tip: Refers to the tapered, rounded insertion end of a catheter

Urethra: The natural tube through which urine exits the bladder

Vacuum Relief Valve: A feature on the leg bag tubing that helps prevent collapse of the tubing, as well as collapse of an external urinary pouch or catheter

Vented Leg Bag: A special vacuum relief mechanism featured on the oval kink-resistant tubing and the companion pouch which also features an air vent. These combined features help to minimize a vacuum in the leg bag as well as in the tubing. A vacuum is created as the urine cools outside the body. The vacuum will stall urine drainage through the tubing and/or prevent the leg bag from emptying completely

Bowel Catheter Systems

ActiFlo Indwelling Bowel Catheter System with Disposable Odor-Barrier Collection Bag with Filter

Catheter Kit Includes:

- ▶ Catheter with odor-barrier technology (1)
- ▶ 2500 mL Disposable Odor-Barrier Collection Bag with Filter
- ▶ Hydrocolloid Skin Barriers (2)
- ▶ Lubricating Jelly Packets (2)
- ▶ Syringe (1)
- ▶ 1000 mL Irrigation Bag (1)
- ▶ Instruction Booklet (1)
- ▶ Not Made with Natural Rubber Latex
- ▶ Non Sterile

Stock No	Low-Impact Zone	Kits/Box
32006	4 cm	1
32007	6 cm	1

ActiFlo Indwelling Bowel Catheter System with Drainable Odor-Barrier Collection Bag

Catheter Kit includes:

- ▶ Catheter with odor-barrier technology (1)
- ▶ 3000 mL Drainable Odor-Barrier Collection Bag (1)
- ▶ Hydrocolloid Skin Barriers (2)
- ▶ Lubricating Jelly Packets (2)
- ▶ Syringe (1)
- ▶ 1000 mL Irrigation Bag (1)

Medicare Usual Dressing Change Frequency for Wound Care Supplies

The quantity and type of dressings dispensed at any one time must take into account the current status of the wound(s), the likelihood of change, and the recent use of dressings. Dressing needs may change frequently (e.g., weekly) in the early phases of wound treatment and/or with heavily draining wounds. Surgical dressings must be tailored to the specific needs of an individual patient. The table below lists some coverage guidelines and usual dressing change frequencies. The medical necessity for more frequent dressing changes must be documented in the patient's medical record and submitted with the claim.

Per LCD for Surgical Dressings (L33831), NHIC effective 10-1-2015.

HCPSC	Long Description	Frequency of Change	Wound Condition
A4450	Tape, non-waterproof, per 18 square inches	based on drsg size	
A4452	Tape, waterproof, per 18 square inches	based on drsg size	
A4461	Surgical dressing holder, non-reusable, each	*	
A4463	Surgical dressing holder, reusable, each	*	
A4465	Non-elastic binder for extremity	*	
A4490	Surgical stockings above knee length, each	*	
A4495	Surgical stockings thigh length, each	*	
A4500	Surgical stockings below knee length, each	*	
A4510	Surgical stockings full length, each	*	
A4649	Surgical supply; miscellaneous	*	
A6010	Collagen-based wound filler, dry form, sterile, per gram of collagen	*	
A6011	Collagen-based wound filler, gel/paste, per gram of collagen	*	
A6021	Collagen dressing, sterile, size 16 sq in or less, each	*	
A6022	Collagen dressing, sterile, size more than 16 sq in but less than or equal to 48 sq in, each	*	
A6023	Collagen dressing, sterile, size more than 48 sq in, each	*	
A6024	Collagen dressing wound filler, per 6 inches	*	
A6025	Gel Sheet for dermal or epidermal application, (e.g., silicone, hydrogel, other), each	*	
A6154	Wound pouch, each	3/wk	
A6196	Alginate or other fiber gelling dressing, wound cover, sterile, pad size 16 sq in or less, each dressing	1/day	mod-high exudate
A6197	Alginate or other fiber gelling dressing, wound cover, sterile, pad size more than 16 sq in but less than or equal to 48 sq in, each dressing	1/day	mod-high exudate
A6198	Alginate or other fiber gelling dressing, wound cover, sterile, pad size more than 48 sq in, each dressing	1/day	mod-high exudate

* No established usual maximum, refer to Medicare Utilization Guidelines.

HCPGS	Long Description	Frequency of Change	Wound Condition
A6199	Alginate or other fiber gelling dressing, wound filler, sterile, per 6 inches	2 units (12 in)/day	mod-high exudate
A6203	Composite dressing, sterile, pad size 16 sq in or less, with any size adhesive border, each dressing	3/wk	
A6204	Composite dressing, sterile, pad size more than 16 sq in but less than or equal to 48 sq in, with any size adhesive border, each dressing	3/wk	
A6205	Composite dressing, sterile, pad size more than 48 sq in, with any size adhesive border, each dressing	3/wk	
A6206	Contact layer, sterile, 16 sq in or less, each dressing	1/wk	line the wound
A6207	Contact layer, sterile, more than 16 sq in but less than or equal to 48 sq in, each dressing	1/wk	line the wound
A6208	Contact layer, sterile, more than 48 sq in, each dressing	1/wk	line the wound
A6209	Foam dressing, wound cover, sterile, pad size 16 sq in or less, without adhesive border, each dressing	3/wk	mod-heavy exudate
A6210	Foam dressing, wound cover, sterile, pad size more than 16 sq in but less than or equal to 48 sq in, without adhesive border, each dressing	3/wk	mod-heavy exudate
A6211	Foam dressing, wound cover, sterile, pad size more than 48 sq in, without adhesive border, each dressing	3/wk	mod-heavy exudate
A6212	Foam dressing, wound cover, sterile, pad size 16 sq in or less, with any size adhesive border, each dressing	3/wk	mod-heavy exudate
A6213	Foam dressing, wound cover, sterile, pad size more than 16 sq in but less than or equal to 48 sq in, with any size adhesive border, each dressing	3/wk	mod-heavy exudate
A6214	Foam dressing, wound cover, sterile, pad size more than 48 sq in, with any size adhesive border, each dressing	3/wk	mod-heavy exudate
A6215	Foam dressing, wound filler, sterile, per gram	1/day	mod-heavy exudate
A6216	Gauze, non-impregnated, non sterile, pad size 16 sq in or less, without adhesive border, each dressing	3/day	
A6217	Gauze, non-impregnated, non sterile, pad size more than 16 sq in but less than or equal to 48 sq in, without adhesive border, each dressing	3/day	
A6218	Gauze, non-impregnated, non sterile, pad size more than 48 sq in, without adhesive border, each dressing	3/day	
A6219	Gauze, non-impregnated, sterile, pad size 16 sq in or less, with any size adhesive border, each dressing	1/day	
A6220	Gauze, non-impregnated, sterile, pad size more than 16 sq in but less than or equal to 48 sq in, with any size adhesive border, each dressing	1/day	
A6221	Gauze, non-impregnated, sterile, pad size more than 48 sq in, with any size adhesive border, each dressing	1/day	

* No established usual maximum, refer to Medicare Utilization Guidelines.

Medicare Utilization Chart

Restore Foams

TRIACT technology is an innovative lipido-colloid formulation in select Restore wound dressings. The unique composition of TRIACT technology provides a moist wound interface and allows virtually pain-free removal. It also reduces trauma to delicate tissue upon removal. Dressings with TRIACT technology are designated with the TRIACT logo on the packaging.

- ▶ Stays in Place Due to Micro-Adherent Technology Facilitating
- ▶ Easier Application and Reduced Risk of Maceration
- ▶ Excellent Conformability
- ▶ Available in Several Types of Dressings

Restore Non-Adhesive Foam, Silver

- ▶ Non-Adhesive, Non-Occlusive Antimicrobial Absorbent Dressing with TRIACT
- ▶ May Help to Reduce Infection in Moderately to High Exuding Partial- and Full-Thickness Wounds
- ▶ Super-Absorbent Foam Pad Ensures Drainage of Exudates and Helps Protect the Skin Around the Lesion from Maceration
- ▶ Soft, Semi-Permeable Backing
- ▶ Contains Silver Sulfate

Stock No	HCPCS	Description	Quantity/Box
509345	A6209	4" x 4"	10
509346	A6210	6" x 8"	10

Caution: Federal (USA) law restricts this device to sale by or on the order of a physician or licensed healthcare professional. Refer to Instructions for Use for contraindications, warnings, precautions, and possible complications.

TRIACT Foam with Silicone Border

- ▶ TRIACT Technology helps create a moist, wound-healing interface
- ▶ TRIACT Technology helps prevent damage to newly formed tissue during dressing removal
- ▶ Silicone border offers virtually pain-free removal

Stock No	HCPCS	Description	Quantity/Box
550762	A6212	4" x 4" with pad size 2.5" x 2.5"	10

- ▶ Conformable Semi-Occlusive Dressing with Flexible Outer Layer
- ▶ Maintains Moist Wound Environment
- ▶ Manages Minimal to Moderate Exudate in Partial- and Full-Thickness Wounds
- ▶ Available With or Without Tapered Edges, Specialty Shapes
- ▶ Includes Disposable Wound Measuring Guide

Stock No	HCPCS	Description	Quantity/Box
519953	A6234	Without Tapered Edges 4" x 4"	5
519954	A6235	Without Tapered Edges 6" x 8"	3
519955	A6236	Without Tapered Edges 8" x 8"	3
519956	A6234	With Tapered Edges 4" x 4"	5
519963	A6235	With Tapered Edges 6" x 6"	5
519957	A6235	With Tapered Edges 6" x 8"	3
519958	A6236	With Tapered Edges 8" x 8"	3
519959	A6235	With Tapered Edges/Triangle Shaped 17 sq in	5
519965	A6235	With Tapered Edges/Triangle Shaped 26.5 sq in	5

Restore Extra Thin Hydrocolloid: Sterile

- ▶ Thinner Semi-Occlusive Dressing with Flexible Backing
- ▶ Maintains Moist Wound Environment
- ▶ Manages Minimal Exudate in Shallow Wounds
- ▶ Helps Protect Skin from Friction Injury
- ▶ Includes Disposable Wound Measuring Guide

Stock No	HCPCS	Description	Quantity/Box
519921	A6234	4" x 4"	5
519923	A6235	6" x 8"	3
519925	A6236	8" x 8"	3

Restore Hydrocolloid with Foam Backing: Sterile

- ▶ Occlusive Dressing with White Foam Backing
- ▶ For Low Friction Areas with Moderate Exudate
- ▶ Includes Disposable Wound Measuring Guide

Stock No	HCPCS	Description	Quantity/Box
519930	A6234	4" x 4"	5
519932	A6235	6" x 8"	3
519935	A6236	8" x 8"	3

Restore Wound Cleanser and Skin Care

Restore Wound Cleanser

- ▶ Helps Remove Particulate Matter and Other Debris From Wound Bed
- ▶ No-Rinse Alternative to Saline and Harsh Antiseptic Cleansers

Stock No	HCPCS	Description	Quantity/Box
529975	A6260	8 oz pump spray	12
529976	A6260	12 oz pump spray	12

Restore Skin Cleanser

- ▶ For Use on Intact Skin
- ▶ Cleanses Peristomal and Perineal Skin of Urinary and Fecal Discharge
- ▶ Gentle, Non-Irritating
- ▶ Must Be Rinsed

Stock No	HCPCS	Description	Quantity/Box
517210	A9270	8 oz (237 mL) Pump Spray	12

Restore Cleanser & Moisturizer

- ▶ Effective Skin Protection for People with Urinary and/or Fecal Incontinence
- ▶ Cleanser, Moisturizer, Protective Breathable Barrier for Skin
- ▶ Dimethicone-Based
- ▶ No Rinse

Stock No	HCPCS	Description	Quantity/Box
529977	A6250	7.5 oz (222 mL) Pump Spray	12
529978	A6250	11.5 oz (340 mL) Pump Spray	12

Restore DimethiCreme Skin Protectant

- ▶ Dimethicone-Based Protective Breathable Barrier
- ▶ Use on Skin or Mucous Membrane Surfaces Exposed to Harmful Stimuli
- ▶ Moisturizes and Protects
- ▶ Not for Use Under Adhesive Products

Stock No	HCPCS	Description	Quantity/Box
529979	A6250	4 oz (118 mL) Tube	12

Restore Skin Conditioning Creme

- ▶ Moisturizes and Soothes Dry, Flaky Skin
- ▶ May be Used Under Adhesive Products

Stock No	HCPCS	Description	Quantity/Box
517220	A6250	4 oz (120 mL) Bottle	12

Demonstrated to remove key barriers to wound healing.

Hydrofera Blue antibacterial foam

- Manages bioburden
- Exudate management

Endoform dermal template

- Broad-spectrum MMP inhibition²
- Intact extracellular matrix

Innovation award winners¹

2014

Hydrofera **BLUE**

When managing bioburden is a priority.

2013

endoform
dermal template

The strength of a dermal template.
The simplicity of collagen.

Skin Tear Resources

The ISTAP Skin Tear Resource Kit has been designed to help implement a systematic approach to the prevention, management, and treatment of skin tears.

Hollister is proud to support the International Skin Tear Advisory Panel in the prevention, assessment, and treatment of skin tears. The support of Hollister has been provided through an unrestricted educational grant.

This information is provided for general medical educational purposes only.

More information is available at www.skintears.org

Skin Tears Defined

A wound caused by shear, friction, and/or blunt force resulting in separation of skin layers. A skin tear can be partial-thickness (separation of the epidermis from the dermis) or full-thickness (separation of both the epidermis and dermis from underlying structures.)¹

Skin Tear Risk Assessment Pathway²

Assess and Manage

Skin Tear Decision Algorithm³

TREATMENT OPTIONS in accordance with local wound management protocols

Type 1: No skin loss
Linear or flap tear which can be repositioned to cover the wound bed

Type 2: Partial flap loss
Flap cannot be repositioned to cover the wound

Type 3: Total flap loss
Entire wound bed is exposed

Epidermolysis Bullosa Resources

Epidermolysis Bullosa (EB) is a rare genetic connective tissue disorder. There are many genetic and symptomatic variations of EB, but all share the prominent symptom of extremely fragile skin that blisters and tears from minor friction or trauma. Internal organs and bodily systems can also be seriously affected by the disease. EB is always painful, is often pervasive and debilitating, and is in some cases lethal before the age of 30. EB affects 1 out of every 20,000 live births and those born with it are often called ‘Butterfly Children’ because as the analogy goes, their skin is as fragile as the wings of a butterfly. There is no treatment or cure. Daily wound care, pain management and protective bandaging are the only options available.¹

Hollister has several helpful tools developed to help educate and guide those in the medical community as well as patients.

- Healthcare Provider EB Resource Kit
- EB Resource brochures
- Wound Dressing Application and Selection Guide
- Practical cut-out poster
 - » Demonstrates the various ways to cut dressings for different body parts
- Patient EB Resource Kit
 - » This new patient-oriented kit is designed to give families an “EB starter kit” and includes bandage scissors, a handy tip card, product samples, EB brochures, and more.

- Find us on Facebook and Twitter – Search “EB Resource”

Reference: 1. www.debra.org

Abrasion: Wearing away of the skin through some mechanical process (friction or trauma)

Abscess: Accumulation of pus formed in tissue as a result of infection

Alginate: A highly absorptive dressing derived from brown seaweed

Cellulitis: Inflammation of the tissues indicating a local infection; characterized by redness, edema, and tenderness

Collagen: Protein found in skin and connective tissue

Debridement: Removal of foreign material and devitalized or contaminated tissue from a wound

Dehiscence: Separation of wound edges

Denude: Removal or loss of superficial skin layers

Dressing: Any of various material used for covering and protecting wounds

Edema: Swelling

Epidermis: Outermost layer of the skin

Erythema: Diffuse redness of the skin

Eschar: Dead tissue

Excoriation: A scratch or abrasion on the skin

Exudate: Wound fluid or drainage

Friction: Rubbing that causes mechanical trauma to the skin

Full-thickness: Tissue destruction extending through the dermis to involve subcutaneous level and possibly muscle, fascia, or bone

Granulation: Formation of connective tissue and many new capillaries in a full-thickness wound; typically appears as red and cobblestoned

Hydrocolloid dressing: A category of wound dressings composed of materials, such as gelatin, pectin, and carboxymethylcellulose, that provide a moist healing environment and adhere to the skin around the wound

Hydrogel: Water- or glycerin-based gels, impregnated gauzes, or sheet dressings. Hydrogels maintain a moist healing environment and absorb a minimal amount of wound exudate

Hydrophilic: Attracting moisture

Infection: Invasion and multiplication of microorganisms in the body tissues

Maceration: Softening of tissue by soaking in fluids

Necrotic: Devitalized tissue; may appear yellow and moist, gray, or dark and leathery

Partial-thickness: Wounds that extend through the epidermis and may involve the dermis; these wounds heal by re-epithelialization

Peri-wound: The area immediately around the wound

Pus: Thick fluid composed of leukocytes, bacteria, and cellular debris

Shear: Sliding of skin over subcutaneous tissues and bones obstructing cutaneous capillaries, which may lead to ischemia

Pressure Ulcer Stages:

Suspected Deep Tissue Injury: Purple or maroon localized area of discolored intact skin or blood-filled blister due to damage of underlying soft tissue from pressure and/or shear. The area may be preceded by tissue that is painful, firm, mushy, boggy, warmer, or cooler as compared to adjacent tissue.

Deep tissue injury may be difficult to detect in individuals with dark skin tones. Evolution may include a thin blister over a dark wound bed. The wound may further evolve and become covered by thin eschar. Evolution may be rapid exposing additional layers of tissue even with optimal treatment.

Stage I: Intact skin with non-blanchable redness of a localized area usually over a bony prominence. Darkly pigmented skin may not have visible blanching; its color may differ from the surrounding area.

The area may be painful, firm, soft, warmer, or cooler as compared to adjacent tissue. Stage I may be difficult to detect in individuals with dark skin tones. May indicate “at risk” persons (a heralding sign of risk).

Stage II: Partial-thickness loss of dermis presenting as a shallow open ulcer with a red pink wound bed, without slough. May also present as an intact or open/ruptured serum-filled blister.

Presents as a shiny or dry shallow ulcer without slough or bruising. This stage should not be used to describe skin tears, tape burns, perineal dermatitis, maceration, or excoriation. Bruising indicates suspected deep tissue injury.

Stage III: Full-thickness tissue loss. Subcutaneous fat may be visible but bone, tendon, or muscle are not exposed. Slough may be present but does not obscure the depth of tissue loss. May include undermining and tunneling.

The depth of a stage III pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput, and malleolus do not have subcutaneous tissue and stage III ulcers can be shallow. In contrast, areas of significant adiposity can develop extremely deep stage III pressure ulcers. Bone/tendons is not visible or directly palpable.

Stage IV: Full-thickness tissue loss with exposed bone, tendon, or muscle. Slough or eschar may be present on some parts of the wound bed. Often include undermining and tunneling.

The depth of a stage IV pressure ulcer varies by anatomical location. The bridge of the nose, ear, occiput, and malleolus do not have subcutaneous tissue and these ulcers can be shallow. Stage IV ulcers can extend into muscle and/or supporting structures (e.g., fascia, tendon, or joint capsule) making osteomyelitis possible. Exposed bone/tendon is visible or directly palpable.

Pressure Ulcer Stages as revised and copyrighted by Nat'l Pressure Ulcer Advisory Panel, Feb., 2007

Pressure Ulcer Stages (continued):

Unstageable Pressure Ulcer: Full-thickness tissue loss in which the base of the ulcer is covered by slough (yellow, tan, gray, green, or brown) and/or eschar (tan, brown, or black) in the wound bed.

Further Description: Until enough slough and/or eschar is removed to expose the base of the wound, the true depth, and therefore stage, cannot be determined. Stable (dry, adherent, intact without erythema or fluctuance) eschar on the heels serves as “the body’s natural (biological) cover” and should not be removed.

Sinus Tract: A course or pathway which can extend in any direction from the wound base; results in dead space with potential for abscess formation

Slough: Stringy, necrotic tissue; usually yellow, tan, gray, green, or brown

Strip: Removal of epidermis by mechanical means, usually tape

Ulcer: Loss of epidermis/dermis or mucous membrane with definite margins

Undermine: Skin edges of a wound that have lost supporting tissue under intact skin

Wound: A break in the integrity of the skin; an injury to the body which causes a disruption of the normal continuity of the body structures

Wound Margin: Rim or border of a wound

Skin Structure:

The **epidermis**, which is the outermost layer of the skin, is characterized as follows: avascular, varies in thickness (depending on body location), a dry structure which sheds cells and replaces itself every 4 to 6 weeks; approximately the thickness of a piece of plastic wrap

The **dermis** is located directly beneath the epidermis and is characterized as follows: provides strength and structural support through a vascular network of connective tissue blood vessels, nerves, hair, and nails. Sebaceous glands and sweat glands originate from this layer, which is thicker than the epidermis

Below the dermis is the **subcutaneous tissue** which is composed of major vessels, lymphatics, fat, and connective tissue. This area provides insulation and nutritional support for the skin. Located below the subcutaneous tissue are fascia, muscles, tendons, and bone. The thickness of the dermis and subcutaneous layers vary from person to person and on different parts of the body

Types of Ulcers

Pressure Ulcers: A pressure ulcer is localized injury to the skin and/or underlying tissue usually over a bony prominence as a result of pressure, or pressure in combination with shear and/or friction. A number of contributing or confounding factors are also associated with pressure ulcers; the significance of these factors is yet to be elucidated.

Venous Ulcers: These are the most common type of lower-leg ulcers in ambulatory people. The underlying cause involves vein damage or an incompetent calf muscle pump action which leads to venous hypertension. As a result, the blood pools in the lower extremities causing edema and leakage of fibrinogen and other blood products into the tissues. Trauma to the area or increased pressure within the tissues results in ulceration.

Arterial Ulcers: Arterial ulcers result from chronic or acute arterial insufficiency to the skin and subcutaneous tissue of the lower extremities. The most common cause is a progressive disease: atherosclerosis. The precipitating event leading to ulceration is usually trauma, such as a bumped toe or tight shoes. Arterial ulcers may occur alone or in combination with diabetes, venous stasis, and numerous other conditions. Multidisciplinary management of these patients with early intervention and close monitoring is key to prevention of more serious complications.

Neuropathic Ulcers: Neuropathic ulcers may occur in individuals with diabetes, spinal cord injury, Hansen's disease, or other conditions that result in loss of sensation in the legs and feet. Diabetic foot ulcers are most commonly caused by peripheral neuropathy and peripheral vascular disease. Multidisciplinary management of these patients with early intervention and close monitoring is key to prevention of more serious complications.

Virtually Awesome.

ConnectEd Wound Care
Education

Web-Based Learning Management System

A smarter way to learn.

ConnectEd is a new Web-based education resource from Hollister Wound Care that is transforming the way bedside nurses learn about advanced wound care.

Unlike other systems, **ConnectEd** can be integrated into existing learning management systems and provides customizable tracking and reporting documentation.

For more information visit www.HollisterWoundCare.com/Connect-Ed or call your Hollister Wound Care representative today.
