

Female Urinary Pouch and Male Urinary Pouches

The Hollister Female Urinary Pouch and Male Urinary Pouches provide effective ways to manage urine output for non-ambulatory patients. The urinary pouches are not made with natural rubber latex and meant to be connected to leg or gravity drainage bags. The male urinary pouches also provide options for men when an external catheter is not an option.

Both products are alternatives to:

- Indwelling catheters, which may be associated with increased risk of urinary tract infections
- Absorbent pads and diapers, which may affect patient dignity, allow for compromised skin integrity, and may require frequent changes

Both products feature:

- Skin barrier that may be cut for a custom fit
- Odor-barrier film that helps manage odor effectively
- Universal connector that fits most leg or night drainage bag systems

Female Urinary Pouch

Male Urinary Pouch

Male Urinary Pouches

Male Urinary Pouch External Collection Device*
